Processor Setup Guide

Last updated: January, 2022

Processor Setup Guide

Document Number: 100003.en_US-202201

1 Processor Setup

Changing or Setting Up Processor

Below are instructions for changing or setting up your processor.

If you are requesting a processor change and the partner on your account is not PayPal, VeriSign, or CyberCash, you must contact your existing Partner/Reseller to verify that the processor can be changed. If your Partner allows the change then the change request will need to come from an authorized user on the Partner's account. Some processors are also resellers of the Payflow service and changing the processor can cause the existing account with PayPal to be cancelled.

If you change to a different processor and you have deactivated your old processor account, you will no longer be able to perform credits on transactions done through your old processor. If your old processor account remains active, then you would still be able to perform these transactions. If the old processor account is deactivated, in order to perform credits, you will be required to enter these as new credit transactions. This can be done programmatically or manually using PayPal Manager. Additionally, if you have deactivated your old processor account, all transactions that were authorized using your old processor must be captured before changing processors.

For additional questions, contact Payflow Customer Service - payflow-support@paypal.com.

1. Perform the following steps - Only email back the one page for your processor, not the entire set. Fill out each line utilizing the multiple choices and character / digit limits on each line.

2. Contact your merchant bank to obtain the processor that your account is using. The following processors are compatible with PayPal at this time:

> - American Express
> - Norwest (ACH) - Update
> - TeleCheck (Internet Check)
> - First Data Merchant Services (FDMS) Nashville
> - First Data Merchant Services (FDMS) South
> - First Data Merchant Services (FDMS) North (CardNet)
> - Global Payments East (NDC East)
> - Global Payment Central (MAPP)
> - Heartland
> - Litle
> - Merchant e-Solutions (Cielo Payments)
> - Moneris
> - NOVA (Elavon)
> - Paymentech - Salem
> - Paymentech - Tampa
> - SNET - SecureNet
> - TSYS (Vital/VisaNet)
> - Vantiv

2. If this is a request for a processor change:
    Ensure that all transactions authorized on the old processor have been captured or
    submitted for settlement. Once the processor is changed, (If you have deactivated the old
    processor) any transactions authorized under the old processor that have not been captured
    will need to be re-authorized under the new processor.

3. If this is a request for a processor change, **or** you are setting up a new account, see the
    appropriate processor information form (in the following sections) for information needed
    to set up the processor. Fill out the requested information for your processor. All
    information marked with * is required. Email the completed processor information form
    to Payflow-support@PayPal.com. You may include your bank's VAR sheet as supporting
    documentation (this is optional). <u>The VAR sheet alone is not sufficient for a change.</u>

4. Once PayPal Customer Service updates your account, you will receive a confirmation by
    email. Please allow up to 1 hour for the changes to take effect.

5. It is highly recommended that you perform a "test" transaction on the live servers using a
    personal credit card to verify that the information is correct at both PayPal and your
    processor.
    To perform a test transaction:

    a. Log in to PayPal Manager at https://manager.paypal.com.

    b. Select "Virtual Terminal" from the toolbar.

    c. Select "Single Transaction". Refer to the online help on PayPal Manager for
        instructions on performing a transaction.

    d. Enter $1.00 for the test transaction, and click **Submit**. You should receive a result code
        of "0" and a response message of "approved".

If you have any problems with processing transactions:

1. Contact your merchant bank to verify the processor information.

2. Contact PayPal Customer Service at payflow-support@paypal.com to verify the processor
    information.

If you have any problems with receiving funds at your commercial (checking) bank:

1. Verify that the transaction(s) have settled. Look at the detail record and see if a Batch ID
    number was issued.

2. Contact your merchant bank to verify the routing and account number on file.

American Express

Complete this form and email it to Payflow-support@PayPal.com. Once the form is received, your account is updated, and you will receive a confirmation by email. Fields marked with an * are required .

* PayPal Login ID: _____

* PayPal Login ID: _____
* Account Contact Name: _____
* Case #: _____

Processor Information
PayPal services requires the following information to setup your account with TeleCheck. You can obtain this information by contacting TeleCheck at 1-800-TELECHECK (1-800-835-3243).

* Merchant ID (IP Code): _____ (8 digits)

PayPal has partnered with TeleCheck to allow you to process online checks.

Telecheck is for API/Web internet check processing only. Accounts with Telecheck do not have the option to use Payflow or PayPal's Virtual Terminal or Recurring billing for electronic checks.

In order to add TeleCheck as a processor or as an added processor first obtain an account and VAR sheet from Telecheck.

Note:
•If your partner is not PayPal, VeriSign, eBay, or CyberCash, you must contact your existing partner/reseller to verify that the processor can be added. Some processors are also resellers of the Payflow service and changing the processor can cause your existing account with PayPal to be cancelled.
•All processor change requests must come from the primary or secondary contact listed on the PayFlow Manager account or a user with Admin permissions.
•Update takes place after the top of the hour once the account has been updated with new processor information.
From the TeleCheck website:

As the leader in electronic check commerce, TeleCheck brings its expertise in information and risk management together with the efficiencies and safety of electronic processing. Whether merchants choose to conduct business at the point-of-sale, over the Internet, by telephone, or through timed/recurring payments, TeleCheck can process all electronic check transactions. Our services assure the timely and secure deposit of funds into a business's account. We help merchants attract new customers, improve cash flow and increase sales - bringing their business into the future today

TeleCheck has found that most merchants face 3 primary concerns when deciding whether to accept e-checks: demand, security and expense. The TeleCheck ICA and CBP services were developed in response, and with sensitivity to, all three issues.

Demand: According to recent studies only 50% of consumers have a credit card, while 95% of consumers own a checking account. Attract additional customers by targeting a population segment that wants the convenience of Internet/Phone shopping, with the comfort and familiarity of paying by check.

Security: TeleCheck employs robust risk management tools that reduce fraud through real time authentication, flexible transaction limits, bank account screening, and identity-based negative files. All transactions are screened against our 547 million historical records in just seconds, providing you with unmatched security screening.

Expense: TeleCheck prices are usually lower than credit cards, and merchants find that the incremental sales generated by the additional payment type more than justify the expense.

You can find out more information regarding TeleCheck either online or by phone at 1-800-TELECHECK (1-800-835-3243).

First Data Merchant Services (FDMS) Nashville

Complete this form and email it to Payflow-support@PayPal.com. Once the form is received, your account is updated, and you will receive a confirmation by email. Fields marked with an * are required.
